

SamplingThread::startThread

```
graph RL; A[SamplingThread::run] --> C[SamplingThread::startThread]; B[SamplingThread::getData] --> C;
```

The diagram illustrates a control flow where two methods, `SamplingThread::run` and `SamplingThread::getData`, both call `SamplingThread::startThread`. The `startThread` method is highlighted in a gray box, while the other two are in white boxes. Arrows point from the right boxes to the left box.

SamplingThread::run

SamplingThread::getData
